Drontal™

Dog Tasty Bone Tablets

Product Description

Drontal Dog Tasty Bone Tablets is light brown to brown colour, meat-flavoured, bone-shaped tablet. Each tablet contains 150 mg of febantel, 144 mg of pyrantel embonate and 50 mg of praziquantel.

Pharmacodynamics

The product is an anthelmintic containing as active substances the tetrahydropyrimidine derivative pyrantel (as the embonate salt), the pro-benzimidazole febantel and praziquantel, a partly hydrogenated pyrazinoisoquinoline derivative. It is effective against certain roundworms and tapeworms.

In this fixed combination pyrantel and febantel act synergistically against roundworms (ascarids, hookworms and whipworms) in dogs. In particular, the action spectrum covers *Toxocara canis*, *Toxascaris leonina*, *Uncinaria stenocephala*, *Ancylostoma caninum* and *Trichuris vulpis*.

The spectrum of activity of praziquantel covers tapeworm species in dogs. In particular, it includes all *Taenia* species, as well as *Multiceps multiceps*, *Dipylidium caninum*, *Echinococcus granulosus* and *Echinococcus multilocularis*. Praziquantel acts against all intestinal stage of these parasites.

Pyrantel acts like nicotine as a cholinergic agonist, causing spastic paralysis of roundworms via a depolarizing neuromuscular block.

The anthelmintic efficacy of febantel is due to its ability to inhibit the polymerization of tubulin to microtubuli. The resulting structural and functional metabolic disturbances exhaust the parasite's energy reserves and kill it in 2-3 days. Praziquantel is absorbed very rapidly through the parasite's surfaces and is evenly distributed throughout their bodies. It causes severe damage of their integument, leading to disruption of metabolism and thence to death.

Pharmacokinetics

Praziquantel is absorbed almost completely in the small intestine following oral administration to dogs. Absorption is very rapid reaching maximum serum levels within 0.5 to 2 hours. After absorption, the drug is widely distributed through the body. Plasma protein binding is high. Praziquantel is rapidly metabolized in the liver leading to inactive metabolites. In dogs, metabolites are eliminated by urine (66% of an oral dose) and

via bile (15%) in the feces. The elimination half-life in dogs is about 3 hours. Pyrantel (as embonate), being a low water-soluble compound, is poorly absorbed in the gastrointestinal tract, reaching the final parts of the intestine. The absorbed drug is extensively metabolized and the parent compound/metabolites are excreted in the urine. Febantel is a pro-drug that after oral administration and oral absorption is metabolized to fenbendazole and oxfendazole, the chemical entities exerting the anthelmintic effect. The active metabolites are excreted via the feces.

Indication

Treatment of mixed infections by nematodes and cestodes of the following species:

Roundworms: Ascarids (adult and late immature forms):

Toxocara canis, *Toxascaris leonina*

Hookworms (adults): *Uncinaria stenocephala*, *Ancylostoma caninum*

Whipworms (adults): *Trichuris vulpis*

Tapeworms (adult and late immature forms): *Echinococcus granulosus*, *Echinococcus multilocularis*, *Dipylidium caninum*, *Taenia* spp.

Recommended dose and Method of Administration

For oral administration only.

For treatment of dogs: 15 mg febantel, 14.4 mg pyrantel embonate and 5 mg praziquantel/kg body weight (equivalent to one tablet per 10 kg body weight).

Dosages are as follows:

Body weight (kg)	Number of tablets
2 - 5	½
> 5 - 10	1
> 10 - 15	1½
> 15 - 20	2

For each additional 5 kg bodyweight, administer an additional half tablet.

Administration and duration of treatment:

The tablets are flavoured and studies have shown that they are

palatable and are taken voluntarily by the majority (88%) of dogs tested. The tablets can be administered with or without food. Access to normal diet does not need to be limited before or after treatment.

Tablets should be given as a single administration. The advice of a veterinarian should be sought regarding the need for and frequency of repeat treatment. Not for use in dogs weighing less than 2 kg.

Contraindications

Do not use in cases of hypersensitivity to the active substances or to any of the excipients.

Do not use during the 1st and 2nd trimesters of pregnancy (see section Pregnancy and lactation).

Warning and Precautions

Special warnings for each target species

Fleas serve as intermediate hosts for one common type of tapeworm - *Dipylidium caninum*.

Tapeworm infestation is certain to re-occur unless control of intermediate hosts such as fleas, mice etc. is undertaken.

Special precautions for use in animals

Parasite resistance to any particular class of anthelmintic may develop following frequent, repeated use of an anthelmintic of that class.

To minimize the risk of reinfestation and new infestation, excreta should be collected and properly disposed of for 24 hours following treatment.

Special precautions to be taken by the person administering the veterinary medicinal product to animals

In case of accidental ingestion, seek medical advice immediately and show the package leaflet or the label to the physician.

In the interests of good hygiene, persons administering the product directly to a dog or by adding it to the dog's food should wash their hands afterwards.

Other precautions

Since it contains praziquantel, the product is effective against *Echinococcus* spp. which do not occur in all EU member states but are becoming more common in some. Echinococcosis represents a hazard for humans. As echinococcosis is a notifiable disease to the World Organisation for Animal Health (OIE), specific guidelines on the treatment and follow-up, and on the safeguard of persons, need to be obtained from the relevant competent authority.

Interaction with Other Medicinal Product

The anthelmintic effects of this product and piperazine-containing products may be antagonized when the two drugs are used together.

Pregnancy and Lactation

Teratogenic effects attributed to high doses of febantel administered during early pregnancy have been reported in rats, sheep and dogs.

The safety of the product has not been investigated during the 1st and 2nd trimesters of pregnancy. Do not use in pregnant

dogs during the 1st and 2nd trimesters of pregnancy (see section Contraindication). A single treatment during the last trimester of pregnancy or during lactation has been demonstrated to be safe.

Adverse Reactions

In very rare cases mild and transient digestive tract disorders (e.g. vomiting) may occur.

The frequency of adverse reactions is defined using the following convention:

- Very rare (fewer than 1 in 10,000 animals, including isolated reports)

Symptoms and Treatment of Overdose

10 times the recommended dose of the product was tolerated without signs of adverse reactions in dogs and pups.

Withdrawal Period

Not applicable

Do not store above 30°C.

Dosage Forms and Packaging Available

Drontal Dog Tasty Bone Tablets is available in pack of 102 tablets per box.
