

NEOMYCIN PF-50% W/W POWDER

Composition:

Neomycin Sulfate.....12.5kg
Exp. Qs.....25kg

Description

Yellowish Powder

Pharmacodynamic

Neomycin is an antibiotic of the aminoglycoside obtained from *Streptomyces fradiae*. Its spectrum of activity includes Gram positive bacteria, especially *Staphylococcus* and *Streptococcus* less active, and gram negative organisms, especially *Escherichia coli*. Neomycin binds to the 30S subunit of the bacterial ribosome, which disturbs the reading of the constituent code of the messenger RNA, and finally the bacterial protein synthesis. At high concentrations, it has been shown that aminoglycosides damage the bacterial cell wall, adding bactericidal properties to bacteriostatic properties.

Pharmacokinetic

Neomycin is very poorly absorbed from the gastrointestinal tract. In plasma and tissue concentrations of neomycin are very low. It is present in large quantities and persistently in the different sections of the digestive tract.

Neomycin is almost exclusively eliminated in the faeces after oral administration.

Indication

Swine:

For treatment and control of colibacillosis (bacterial enteritis) caused by *Escherichia coli* susceptible to neomycin.

Route of Administration

For oral administration

Recommended dose

Swine:

To provide 10 mg of neomycin sulfate per pound of body weight per day for a maximum of 14 days. The concentration of neomycin sulfate required in medicated feed must be adjusted to compensate for variation in age and weight of animal, the nature and severity of disease signs, and environmental temperature and humidity, each of which affects feed consumption. If symptoms persist after using for 2 or 3 days, consult a veterinarian. Treatment should continue 24 to 48 hours beyond remission of disease symptoms. Discontinue treatment prior to slaughter 3 days. Not for use in liquid feed supplements.

Contraindication

Do not administer to patients with known hypersensitivity to neomycin.

Interaction with other medicinal products

None known.

Pregnancy and lactation

Safety in pregnant animals has not been studied. However, due to very low absorption, the use of specialty during gestation and lactation seems to pose any particular problem.

Side effects

Not known.

Symptoms and treatment of overdose

Not known.

Storage

Store in a cool dry place (<30°C). Strictly avoid light and heat exposure.

Warning and Precaution

Keep out of reach of children / Jauhi ubat dari kanak-kanak

Special warnings for each target species

This drug premix is exclusively for target species listed under "Target species".

Special precautions for use in animals

This drug premix is intended for the manufacture of medicated solid food and cannot be used as such; the rate of incorporation of the medicated premix in solid food can not be less than 5 kg / tonne

Special precautions to be taken by the person administering the product to animals

Aminoglycosides may cause hypersensitivity (allergy) following injection, inhalation, ingestion or skin contact.

Allergic reactions to these substances may be severe.

In patients with known hypersensitivity to aminoglycosides, do not handle this product.

Handle it produced by taking the recommended precautions to avoid any risk of exposure.

Wearing a mask, goggles and gloves is recommended when preparing the food. Avoid breathing dust and avoid contact with skin and eyes.

In case of appearance, following exposure, symptoms such as rash, consult a doctor and show the package leaflet. Swelling of the face, lips or eyes or difficulty breathing are more serious symptoms and require urgent medical attention.

Shelf life

36 months

Shelf life after opening

24 hours

Shelf life after dilution or constitution

24 hours

Withdrawal period

Pigs: 3 days

Packaging

25kg

Revised date

28/07/2017
