

SULBRIMO

Capsule 200 mg

Composition:

Each vegetable capsule contains:

Sulbutiamine.....200mg

Pharmacodynamic:

Sulbrimo™ gives better physical resistance, improved intellectual performance and psychological balance. Each capsule of Sulbrimo™ contains sulbutiamine which is a thiamine (vitamin B1) derivative. Sulbutiamine crosses the blood brain barrier more easily than vitamin B1 because of its lipophilic properties. This leads to an increased formation of thiamine triphosphate that acts as a regulator of the synaptic transmission of many neurotransmission systems.

Pharmacokinetic:

Small amounts of thiamine are well absorbed from gastrointestinal tract following oral administration. It is widely distributed to most body tissues and appears in breast milk. Very little is stored in the body and amounts in excess of the body's requirements are excreted in the urine as unchanged thiamine or as metabolites.

Indication:

Symptomatic treatment of all forms of asthenia (Abnormal Body Weakness)

Dosage & Administration:

2 to 3 tablets daily. Duration of treatment is limited to 4 weeks.

For adult use only.

Contraindication:

Contraindicated in those who hypersensitive to any ingredients in the product.

Warning & Precaution:

No special precautions are required.

Overdosage:

There may be agitation with euphoria and tremor in the extremities because of massive absorption of Sulbutiamine. These disorders are transient and rapidly resolve without sequelae.

Adverse Reaction:

There is mild agitation observed in elderly person. Allergic skin reactions are rare. The urine may sometimes give out odor.

Interaction:

Loop diuretics (furosemide, ethacrynic acid, bumetanide): Chronic use of loop diuretics may result in thiamine deficiency. Concomitant intake of thiamine with foods that contain sulfites may inactivate thiamine. Concomitant intake of thiamine with tea, coffee and decaffeinated coffee may inactivate thiamine. This can be reversed by taking thiamine supplements.

Use in Pregnancy & Lactation:

Due to lack of studies in these groups of people, as a precautionary measure, the use of sulbutiamine during pregnancy and lactation is not recommended.

Description:

Two pieces, size '0' maroon colour hard vegetable capsule containing white colour powder.

Presentation:

Blister packing. 6, 10, 15, 20, 30, 40, 45, 50, 60, 70, 80, 90, 100, 120, 150, 300, 500 capsules per box.
