

HOVID NEOMYCIN CREAM 0.5%

VINEO01-VAR2 (MY)

DESCRIPTION

White, opaque cream.

COMPOSITION

Neomycin Sulphate 0.5% w/w

PHARMACODYNAMICS AND PHARMACOKINETICS

Neomycin, a bactericidal antibiotic, is actively transported across the bacterial cell membrane, binds to 30S subunit of bacterial ribosomes, and interferes with an initiation complex between messenger RNA and the 30S subunit, thus inhibiting protein synthesis.

Neomycin is not absorbed percutaneously, but is readily absorbed from large denuded, burned or granulating areas.

INDICATIONS

For treatment of infections of the skin due to susceptible staphylococci and other neomycin-sensitive organisms.

CONTRAINDICATIONS

- Avoid in patients known to be hypersensitive to aminoglycosides.
- Prolonged use is not recommended as it may lead to skin sensitisation.
- Do not use on deep or punctured wounds, serious burns, or raw areas unless directed by physician.
- Concurrent topical and systemic administration of neomycin or related drugs is not recommended since hypersensitivity reactions may occur more frequently under these circumstances.
- This medication is not for ophthalmic use.

PRECAUTIONS

Caution in patients with extensive skin damage or perforated tympanic membranes as deafness may result.

PREGNANCY AND LACTATION

Safety for use in pregnancy and lactation has not been established.

DRUG INTERACTIONS

Concurrent topical use of other aminoglycosides with neomycin or related drugs is not recommended since hypersensitivity reactions may occur more frequently.

MAIN SIDE/ADVERSE EFFECTS

Hypersensitivity reactions, usually of the delayed type.

DOSAGE AND ADMINISTRATION

Route of administration:

Topical

Adults and Children:

Apply to the affected area one to three times a day.

Note: The treated area(s) may be covered with a gauze dressing if desired.

Storage:

Store below 30°C.

Protect from freezing.

Presentation/Packing:

Cream 0.5% x 15 g, 30 g

(Not all presentations may be available locally)
