

GTN ACTAVIS TABLET 500 MCG

Presentation

White, biconvex tablets, with diameter 6.5 mm and plain on both sides.

Pharmacodynamics

Glyceryl trinitrate is one of a group of medicines called nitrate vasodilators. These medicines work by relaxing the muscle layer in the blood vessel wall of the heart. This reduces the strain on the heart by making it easier to pump blood. Glyceryl trinitrate has a double action in the treatment of angina pectoris, by reducing cardiac output and dilation of the coronary arteries.

Pharmacokinetics

Glyceryl trinitrate is readily absorbed from the oral mucosa, but rapidly metabolised so that it only has a fleeting duration of action. Glyceryl trinitrate is also readily absorbed from the gastrointestinal tract, but owing to the extensive first-pass metabolism in the liver, its bioavailability is reduced (short plasma half-life). Glyceryl trinitrate is metabolised by hydrolysis to dinitrates and the mononitrate, which is the main urinary metabolite. The effects of glyceryl trinitrate occur in approximately 2-3 minutes and its action lasts for about 30-60 minutes.

Indication

As a short-acting vasodilator in the prophylaxis and continued treatment of:
1) Angina pectoris
2) Congestive heart failure
3) For the relief of renal and gallbladder colic

Dosage and administration

1-2 tablets (0.5-1.0mg) should be placed under the tongue and allowed to dissolve slowly; this dose should be repeated as required. Dosage should be adjusted according to the response obtained by the individual patient and the severity of the anginal pain. N.B.: Tolerance may develop with daily use, but withdrawal for a week re-establishes the original sensitivity. Discard 60 days after first opening.

Contraindications

Glyceryl trinitrate should not be used in patients with marked anaemia, head trauma, cerebral haemorrhage or closed angle glaucoma. Glyceryl trinitrate is also contraindicated in patients with coronary thrombosis or in those who are sensitive to nitrates. Sildenafil has been shown to potentiate the hypotensive effects of nitrates, and its co-administration with nitrates or nitric oxide donors is therefore contraindicated.

Warnings and Precautions

None known

Side Effects

Side-effects are predominantly headache and facial flushing. Other side-effects include dizziness, weakness and tachycardia.

Pregnancy and Lactation

There is no, or inadequate, evidence of safety of nitrates in human pregnancy or lactation; nitrates should not be administered in pregnancy or lactation unless considered essential.

Interactions with Other Medicaments

Some effects of glyceryl trinitrate are enhanced by alcohol. The hypotensive effects of nitrates are potentiated by concurrent administration of sildenafil.

Symptoms and Treatment of Overdose

Toxic effects of glyceryl trinitrate include vomiting, restlessness, hypotension, syncope, cyanosis and methaemoglobinaemia; coldness of the skin, impairment of respiration, bradycardia and psychosis may ensue. Overdosage should be treated with gastric aspiration and lavage, plus attention to any respiratory and circulatory symptoms. Oxygen may prove additionally useful. Effects of hypotension may be minimized by treating the patient in the recumbent position with the head lowered. Methaemoglobinaemia may be treated with methylene blue intravenously 1-4mg/kg body-weight. The circulation may be maintained with infusions of plasma or suitable electrolyte solutions.

Storage Conditions

Protect from light and store in a dry place below 30°C. Tablets should be stored in the original container which should be kept tightly closed. Keep out of reach of children. Jauhi daripada kanak-kanak.

Packing

30's, 100's

Manufactured by

PT Actavis Indonesia
Jl. Raya Bogor Km. 28, Kelurahan Pekayon, Kecamatan Pasar Rebo
Kota Jakarta Timur, Provinsi DKI Jakarta, Indonesia

Date of revision
