Optizoline™

Eye Drops

Composition

Tetrahydrozoline Hydrochloride 0.05% w/v in a sterile, buffered, preserved aqueous ophthalmic solution.
Benzalkonium Chloride 0.01% w/v as preservative.

Properties

Tetrahydrozoline is a sympathomimetic agent with α -adrenergic activity. It is a vasoconstrictor with a rapid and prolonged action in reducing swelling and congestion of the eyes.

Indications

Optizoline Eye Drops is used as a conjunctival decongestant for the relief of burning, itching, excessive tears and redness due to conjunctival allergies.

Dosage and Administration

Instill one to two drops into each eye three to four times a day.

Contraindications

Contraindicated in patients with narrow-angle glaucoma.

Precautions

Excessive use of the eye drops may produce rebound congestion.
Use with caution in infants and young children.
Use with care to avoid contamination of the contents.

Side Effects

Optizoline Eye Drops is usually well tolerated. Transient irritation may occur in susceptible patients.

Overdosage and Treatment

As the content of tetrahydrozoline in the preparation is very low, overdosage is unlikely to occur. However, excessive intake by mouth may cause depression of the CNS with marked reduction of body temperature and symptoms of bradycardia, sweating, drowsiness, and coma, particularly in children.
There is no specific antidote. Symptomatic and supportive treatment should be given.

Shelf-life

The expiry date is indicated on the packaging.

Presentation

Clear, colourless solution in sterile plastic dropper bottles of 5ml.

Storage

The stability of this product is affected by heat. Store below 30°C.
Discard eye drops 4 weeks after the first opening.

KEEP OUT OF REACH OF CHILDREN
JAUHI DARI KANAK-KANAK
