

DESCRIPTION:
White cream.

PHARMACODYNAMICS:

Liquid paraffin is not irritant when applied to mucous surfaces; it is used as an emollient in irritant skin conditions and for the removal of desquamative crusts.

White soft paraffin is non-irritant to the skin, but is poorly absorbed. It is used as a basis for external preparations which are not intended to be absorbed.

It is used as an emollient and protective in external products.

Cetomacrogol Emulsifying Wax is a colloidal dispersed mixture of cetyl stearyl alcohol with non-ionic emulsifying agents based on fatty alcohol polyglycol ethers.

It may be used to increase the viscosity of oil-in-water and water-in-oil emulsions, thereby improving their stability, and may be added to paraffin preparations to improve their emollient properties.

PHARMACOKINETICS:

Soft paraffin is not readily absorbed by the skin.

Note: There are no data on the other ingredients in humans.

CONTRAINDICATION:

There are no data on contraindications in humans.

PREGNANCY AND LACTATION

None known

DRUG INTERACTIONS

None known

OVERDOSE AND TREATMENT
