

PRISEPTINE SOLUTION

Description: Dark yellow solution.

Content

Providone iodine 10%w/v

Pharmacology

Providone iodine is an iodophore which slowly liberates inorganic iodine in contact with the skin and mucous membranes. Iodine has a powerful bactericidal action.

Indications

For pre-operative preparation of skin, treatment of contaminated wounds, eczematoid ringworm, infection of the skin.

Precautions

This solution when applied to the skin should not be covered with occlusive dressing. Iodine may cause idiosyncrasy. Discontinue use if local irritation causes. It should be used with caution in children below 2 years, pregnancy, lactation and on broken skin.

Contraindication

It is contraindicated in patients on lithium therapy and with thyroid diseases.

Applications

Clean the affected part and then apply the lotion to the skin. As a vaginal douche, the solution may be diluted 3 to 4 times with water.
