

PRIME - B1 TABLETS

Description: White, round biconvex with top-scored.

Contents

Each tab. contains: Thiamine Mononitrate.....100mg

Pharmacology

It is associated with carbohydrate metabolism. It combines with adenosine triphosphate (ATP) to form a coenzyme, thiamine pyrophosphate, which acts as a coenzyme in reactions like decarboxylation of alpha-keto-acids, particularly of pyruvate and alpha-keto-glutarate. In the presence of thiamine deficiency, pyruvic and lactic acids accumulate in the tissue. Thiamine pyrophosphate also acts as a coenzyme in the direct oxidative pathway of glucose metabolism. Deficiency of thiamine results in fatigue, anorexia, gastrointestinal disturbances, tachycardia and irritability. Requirements for thiamine may be increased in conditions such as alcoholism (cirrhosis), hepatic disease, hyperthyroidism, infection, lactation, heavy manual labour, malabsorption syndromes, pregnancy and prolonged diarrhoea.

Indications:

For treatment of thiamine deficiency states.

Precaution:

Large doses may interfere with metabolism of other members of the vitamin B group and may precipitate the symptoms of other deficiency states in poorly nourished patients.

Recommended dosage:

Adults :100mg daily, or according to the physician.

Storage

: Keep container tightly closed.
: Store in a cool, dry place, below 30C.
away from light. Keep out of reach of children.

Presentation/Packing

: Tablet 100mg x 90's

Shelf Life

: 3 years

Manufactured & Distributed by

: **PRIME PHARMACEUTICAL SDN. BHD.**
