

PRIME C CHEWABLE TABLET 250mg

Description: Round, flat, top-scored, orange coloured and flavoured chewable tablet. Diameter = 12.7mm

Content:

Each tablet contains: Ascorbic Acid 75.0mg
Sodium Ascorbate 196.9mg

Indications:

For prevention and treatment of Vitamin C deficiency.

Pharmacology:

Sodium ascorbate has properties similar to those of ascorbic acid. Vitamin C, or ascorbic acid is essential for the formation of collagen and intercellular material, and hence for the development of cartilage, bone, and teeth, and for the healing of wounds.

Oral absorption may be reduced with large doses and elimination is by renal excretion.

Adverse Effects:

Ascorbic acid is usually well tolerated.

Precautions:

- Caution in patients with history of renal stones, hyperoxaluria or oxalosis.
- Megadoses are not recommended without physician's advice.

Drug Interactions:

- Concurrent use with salicylates, barbiturates and primidone may increase urinary excretion of ascorbic acid.
- Oral ascorbic acid should be given an hour or two after deferoxamine infusion since co-administration may enhance tissue iron toxicity.

Dosage and Administration:

Adults - Dietary supplement : Oral, 200 to 250mg a day
Treatment of deficiency : Oral, 250 to 300mg one to three times a day, or as directed.
Children - Oral, 100 to 200mg a day, or as directed.

Storage

: Keep container tightly closed.
Store in a cool, dry place, below 30°C. Protect from light.

Presentation/Packing

: Chewable tab 250mg x 100's

Shelflife

: 3 years
