Xepa-CTM

Tablets

Composition

Each tablet contains Ascorbic Acid 100 mg

Pharmacodynamics

Ascorbic Acid is essential for the synthesis of collagen and intercellular material. It is involved in the conversion of folic acid to folinic acid, in electron transport processes, and in the healing of wounds, and is believed to be involved in the metabolism of tyrosine.

Pharmacokinetics

Ascorbic acid is readily absorbed from the gastrointestinal tract and is widely distributed in the body tissues.

Ascorbic acid in excess of the body's need is rapidly eliminated in the urine and its elimination is usually accompanied by a mild diuresis.

Dosage and Administration

To be administered orally.

Prevention:

Healthy adults and children: one tablet daily.

For the treatment of ascorbic acid deficiency or in conditions requiring more vitamin C: 2 to 6 tablets daily, taken in two to three doses.

Indications

For the treatment and prevention of Vitamin C (ascorbic acid) deficiency.

Contraindications

None known.

Precautions

Use with care in patients with hyperoxaluria, and patients with a deficiency of Glucose-6-Phosphate Dehydrogenase. Ascorbic acid itself is a reactive substance in the redox system, and in consequence can give rise to false reactions, particularly in certain analytical tests involving a colour response such as analysis of glucose, uric acid, creatinine and occult blood.

Side Effects

Xepa-C is usually well tolerated.

Overdosage

Overdosage of Xepa-C is unlikely to cause any severe adverse effects.

Shelf-life

The expiry date is indicated on the packaging.

Presentation

Orange colour mottled, round shaped, flat bevelled edge uncoated tablet with single breakline on one side, 7.9mm in diameter in packs of 100's and 1000's.

Storage

Store below 30°C. Recommended to protect from light.

KEEP ALL MEDICINES OUT OF REACH OF CHILDREN
JAUHI DARI KANAK-KANAK
