

Voltex Cream

Name and Strength of Active Substances :

Each 100 g contains :

Methyl Salicylate	10.20 %	w/w
Menthol	5.44 %	w/w
Eugenol	1.36 %	w/w

Pharmaceutical dosage form :

White cream with aromatic odor.

Pharmacodynamics :

Voltex cream is specially formulated to relieve muscular aches, rheumatic pain, sprains. It is greaseless, non-staining and easy to rub into the skin. Methyl Salicylate and Menthol are known as counterirritants. They work by causing the skin to feel cool and then warm. These feelings on the skin distract you from feeling the aches/sprains deeper in your muscles, joints, and tendons.

Pharmacokinetics :

Voltex Cream may be absorbed through intact skin. Percutaneous absorption is enhanced by exercise, heat, occlusion, or disruption of the integrity of the skin. The amount absorbed will also be increased by application to large areas of skin.

Indications :

For relief of muscular aches, rheumatic pain, strains and sprains.

Dosage and administration :

Apply 3-4 times daily to the affected parts and rub in gently.

Route of administration : Topical use.

Contraindications :

Hypersensitivity to the ingredients.

Not to be used on infected or injured areas of skin.

Warnings and Precautions :

Should be applied only to intact skin, and avoid contact with broken skin wounds or open wounds. The preparation should not be allowed to come into contact with the eyes or with mucous membranes.

Caution : This product contains methyl salicylate and when applied or rub on to the skin, can be absorbed through the skin into the blood. For patients taking warfarin, excessive application on to the skin for muscle or joint pains may increase the chances of bleeding.

Interactions with Other Medicaments :

No drug interactions have been reported.

Statement on usage during pregnancy and lactation :

Generally recognized as safe.

Should be used in accordance with the direction.

Adverse Effects/Undesirable Effects :

Voltex Cream is usually well tolerated. Itching, reddening, or skin rash may be occurred. Inform your doctor of undesirable effects occurred during the use of drug.

Overdosage and Treatment :

Since low systemic absorption of Voltex Cream when applied topically makes overdosage very unlikely. In case of accidental ingestion, any symptoms including dizziness, drowsiness, sweating, nausea, vomiting, vertigo, ataxia, and hyperventilation. Should empty the stomach by emesis, aspiration, or gastric lavage with 5% sodium bicarbonate solution. Treatment of poisoning is symptomatic and supportive.
