

Drontal™

Cat Tablets

Treatment for gastrointestinal
roundworms and tapeworms in cats

Product Description

Drontal™ Cat Tablets is a white to yellowish colour coated tablet. Each tablet contains 230 mg of pyrantel embonate (equivalent to 80 mg pyrantel) and 20 mg of praziquantel.

Pharmacodynamics

Pyrantel acts as cholinergic agonist. Its mode of action is to stimulate nicotinic cholinergic receptors of the parasite, induce spastic paralysis and thereby allow expulsion from the gastrointestinal (GI) system by peristalsis.

Praziquantel is very rapidly absorbed into and distributed throughout the parasite. Both in vivo and in vitro studies have shown that praziquantel causes severe damage to the parasite integument, resulting in contraction and paralysis. There is an almost instantaneous tetanic contraction of the parasite musculature and a rapid vacoulisation of the syncytial tegument. This rapid contraction has been explained by changes in divalent cation fluxes, especially calcium.

In this fixed combination product pyrantel is active against the following ascarids: *Toxocara cati* and *Toxascaris leonina*. Praziquantel is effective against tapeworms, in particular *Dipylidium caninum* and *Taenia taeniaformis*.

Pharmacokinetics

Praziquantel is absorbed very rapidly and almost completely in the stomach and small intestine following oral administration to all species investigated. Maximum serum levels are already reached within 0.3 to 2 hours. Praziquantel is very rapidly distributed into all organs. The elimination half-lives of 14C-praziquantel and its metabolites are between 2 and 3 hours in all investigated species. Praziquantel is rapidly metabolised in the liver. In addition to other metabolites, the main metabolite occurring in each case is the 4-hydroxycyclohexyl derivative of praziquantel. Praziquantel is completely eliminated within 48 hours in the form of its metabolites - between 40 and 71 % in the urine and, via the bile, between 13 and 30 % in the faeces. The embonate salt of pyrantel is poorly absorbed from the gastrointestinal tract in all investigated species.

Indication

For the treatment of gastrointestinal roundworms and tapeworms: *Toxocara cati*, *Toxascaris leonina*, *Dipylidium caninum* and *Taenia taeniaformis*.

Recommended Dose

The recommended dose rates are: 57.5 mg/kg pyrantel embonate and 5 mg/kg praziquantel. This is equivalent to 1 tablet per 4 kg bodyweight.

Body weight (kg)	Drontal™ Cat Tablets
2 kg	½ tablet
4 kg	1 tablet
6 kg	1½ tablet

90208570

Mode of Administration

Oral - The tablets are to be given directly or can be disguised in food. No dietetic measures are necessary.

Contraindication

Do not use simultaneously with piperazine compounds. Not intended for use in kittens less than 6 weeks of age.

Warning and Precautions

Special warnings for each target species. Fleas serve as intermediate hosts for one common type of tapeworm *Dipylidium caninum*. Tapeworm infestation is certain to re-occur unless control of intermediate hosts such as fleas, mice etc is undertaken.

Interaction with Other Medicaments

Do not use simultaneously with piperazine compounds.

Pregnancy and Lactation

Until sufficient studies have been performed with the combination, **Drontal™ Cat Tablets** should not be used during pregnancy.

Undesirable Effects

None known.

Overdose and Treatment

No information.

Withdrawal Period

Not applicable

Storage Condition

Do not store above 30°C.

Dosage Forms and packaging available

Drontal™ Cat Tablets is available in pack of 48 tablets per box.

Manufactured By:
KVP Pharma + Veterinär Produkte GmbH
Projensdorfer Straße 324, 24106 Kiel, Germany.
