AVAPHEN Cough Syrup (Raspberry flavour)

COMPOSITION

Each 5 ml syrup contains Diphenhydramine hydrochloride 14 mg, Ammonium chloride 135 mg
Preservative: Methyl paraben 0.1% w/v
Ethanol 0.43% w/v

DESCRIPTION

It is a brown coloured and raspberry flavour syrup

Pharmacodynamics

Diphenhydramine is antihistamine. It acts by competitively antagonizing histamine at the H1 histamine receptor. Antihistamines do not block the release of histamine. Ammonium hydrochloride: Loss of hydrogen and chloride ions results in a rise serum bicarbonate and pH and a fall in serum potassium. In the liver, the conversion of the ammonium ion into urea frees hydrogen and chloride ions. The resultant decrease in pH corrects the alkalosis.

Pharmacokinetics

Diphenhydramine hydrochloride is well absorbed from the gastrointestinal tract through high first pass metabolism appears to affect system availability. Peak plasma concentrations are achieved about 1 to 4 hours after administration by mouth. A mean peak plasma diphenhydramine concentration of 110ng per ml has been reported after administration of 50 mg four times daily by mouth. Diphenhydramine is widely distributed throughout the body including CNS. It crosses the placenta and has been detected in breast milk. Diphenhydramine is highly bound to plasma proteins.

Metabolism is extensive. Diphenhydramine is excreted mainly in the urine as metabolites; little is excreted as unchanged drug. Excretion is almost complete within 24 hours of administration. Ammonium chloride is absorbed from the gastrointestinal tract. The ammonium ion is converted into urea in the liver; the anion thus liberated into the blood stream and extracellular fluid causes a metabolic acidosis and decreases the pH of the urine; this is followed by transient diuresis.

INDICATIONS

Fast relief from the symptoms of cough and colds, to reduce coughing, relieve sneezing, running nose and watery eyes and to soothe sore throat.

DOSAGE & ADMINISTRATION

Oral administration.

Adults: 5 to 10ml three or four times daily.

Children over 2 years: 2.5 to 5ml three or four times daily.

CONTRAINDICATIONS

Hypersensitivity to diphenhydramine or other antihistamines, nursing mothers, newborn or infants. This

preparation should also be used with caution in epilepsy, prostatic hypertrophy, urinary retention, glaucoma, hepatic disease and porphyria.

SIDE EFFECTS

Sedation, antimuscarinic effect (dry mouth, blurred vision, urinary retention, constipation), gastro intestinal disturbances.

WARNINGS

When used for treatment of cough and cold:

- Not to be used in children less than 2 years of age
- To be used with caution and doctor's or pharmacist's advice in children 2-6 years of age.

If medication causes drowsiness, avoid activities requiring alertness. Possible additive effect if used with hypnotics, sedatives or tranquilizers. Preparation containing diphenhydramine should not be given to patients receiving MAOIs.

PRECAUTIONS

Avoid driving a motor vehicle or operating heavy machinery or drinking alcoholic beverages (see Warnings). A persistent cough may be a sign of a serious condition. If cough persists for more than 1 week, tends to recur, or is accompanied by high fever, rash or persistent headache, patients should be instructed to seek medical advice.

Use in Pregnancy and lactation

If pregnant or nursing, consult your physician before taking this preparation.

Interactions with other medicaments

Additive effects if used with hypnotics, sedatives and tranquilizers (see Warning). Avoid drinking alcoholic beverages when taking Avaphen Cough Syrup.

OVERDOSAGE

In case of accidental overdose, professional assistance must be considered or poison control center should be contacted immediately.

Packing: Amber PET bottle of 90 ml.

Store below 30°C. Protect from light

Shelf-life: Three years from the date of manufacture.

KEEP OUT OF REACH OF CHILDREN.
