COMPOSITION

DESCRIPTION

PHARMACODYNAMICS

PHARMACOKINETICS

INDICATION

RECOMMENDED DOSE

Or as directed by the physician.

For oral use only

1000000

WARNING AND PRECAUTIONS

Potentially serious hypokalaemia may result from beta-2 agonist therapy.

Since mucolytics may disrupt the gastric mucosal barrier, bromhexine should be used with care in patients with history of peptic ulceration.

Not shown.

Administration of salbutamol during pregnancy should only be considered if the expected benefit to mother is greater than any possible risk to fetus.

As salbutamol is probably secreted in breast milk, its use in nursing mothers is not recommended unless the expected benefits outweigh any potential risk.

Tachycardia, palpitation, precordial pain, nervousness, tremors in a few patients. Upper gastrointestinal complaints like nausea, vomiting may be observed in a few cases.

Salbutamol: The preferred antidote for overdose with salbutamol is a cardioselective beta-blocking agent, but beta-blocking drugs should be used with caution in patients with a history of bronchospasm. Hypokalaemia may occur following overdose with salbutamol. Serum potassium levels should be monitored.

Bromhexine: Data not available.

Store in a dry place below 30°C.

24 months from the date of manufacturing of finished product.

Available in glass bottle of 60 & 100 ml.

R03AC02 SALBUTAMOL
