

Calsonate 500mg Capsule

DESCRIPTION

A size 0, red/black capsule.
Each capsule contains 500mg of Calcium Carbonate.

INDICATIONS

Relief of pain in gastric and duodenal ulcers.
Calcium supplementation and deficiency states.

MECHANISM OF ACTION

Calcium is an essential body electrolyte. It is involved in the maintenance of normal muscle and nerve function, and is essential for normal cardiac function and clotting of blood. Calcium is also required for bone formation.

Calcium carbonate also serves as an antacid. It reacts chemically to neutralise or buffer existing quantities of stomach acid but has no direct effect on its output, thus providing relief of hyperacidity symptoms.

PHARMACOLOGY

Calcium is absorbed in the small intestine; about one-third of ingested calcium is absorbed although this can vary depending upon dietary factors and the state of the small intestine. Absorbed calcium is excreted mainly in the urine with some faecal loss. Calcium is also excreted in saliva, sweat, breast milk, bile and pancreatic juice.

DOSAGE

Adults: 1-3 capsules daily or as directed by physicians.

SIDE EFFECTS

Administration of some calcium salts by mouth can cause gastrointestinal irritation and constipation.

CONTRAINDICATIONS

No information is available.

PRECAUTIONS

Calcium salts should be given with caution to patients with impaired renal function, cardiac disease or sarcoidosis.

DRUG INTERACTIONS

Calcium salts reduce the absorption of tetracyclines.

OVERDOSAGE

No information is available.

TOXICOLOGY

No information is available.

PRESENTATION

Calsonate 500mg Capsule is available in packs of 50 x 10's
