

NOSPAN TABLET 30MG

Dextromethorphan, the active ingredient in Reducof Tablet, is a non-opioid dextroisomer of the opiate Levomethorphan, and is commonly used as a cough suppressant in a variety of respiratory tract disorders.

Description(s):

A white colored tablet with one side impressed with a "+".

Ingredient(s):

Each tablet contains:

Dextromethorphan Hydrobromide
30mg

Action(s):

1. Dextromethorphan Hydrobromide is a cough suppressant which has a central action at the cough center in the medulla. Although structurally related to morphine, dextromethorphan has no analgesic and addictive properties. In general, it has little sedative activity.
2. Dextromethorphan Hydrobromide suppresses the cough reflex by acting directly on the cough center in the medulla of the brain. It is commonly prescribed for the relief of non-productive cough due to minor throat and bronchial irritation occurring with colds or due to inhaled irritants.
3. Dextromethorphan Hydrobromide is a potent non-addicting antitussive which is similar in antitussive efficacy as codeine but without the gastrointestinal and subjective effects seen with codeine.
4. Dextromethorphan Hydrobromide is readily absorbed in the gastrointestinal tract. It is metabolized in the liver and excreted in the urine as unchanged dextromethorphan and as demethylated metabolites (including dextrorphan), which has some cough suppressant activity.

Indication(s):

For the relief of unproductive cough due to bronchitis, bronchiolitis, colds, and other respiratory tract disorders.

Dosage and Administration:

The usual adult dose is ½ or 1 tablet three times a day.
To be dispensed on physician's prescription.

Contraindication(s):

Hypersensitivity can occur to any component of this product and MAO inhibitors.

Drug Interaction(s):

Dextromethorphan has additive effects with alcohol and other CNS depressants. Concurrent use with MAO inhibitors may cause excitation, hypertension, and hyperpyrexia.

Precaution(s) / Warning(s):

1. Dextromethorphan Hydrobromide should be used with caution in patients taking CNS suppressant.
2. Dextromethorphan Hydrobromide is extremely metabolized in the liver and should be prescribed with caution to patients with liver disease.

3. Chronic persistent coughs accompanying a disease state or coughs associated with excessive secretions.
4. Safe use of this product during pregnancy and lactation has not been established. Women who suspect pregnancy, pregnant women, or nursing mothers should not be given this product unless it is clearly needed.

Side Effect(s) / Adverse Reaction(s):

Dextromethorphan Hydrobromide is well tolerated. Adverse effects appear to be rare and may include dizziness and gastrointestinal disturbances. Excitation, confusion, and respiratory depression may occur from overdosage.

Symptoms and Treatment for Overdosage and Antidote(s):

Excitation, confusion and respiratory depression may occur after an overdose. There is no specific antidote for an overdose, therefore, treatment of the patients should consist of symptomatic and supportive therapy.

Shelf-Life:

3 years from the date of manufacture.

Storage Condition(s):

Keep in a tight container. Store at temperature below 30°C. Protect from light and moisture.

Packing(s):

Plastic bottle of 100's, 500's, 1000's and 1500's
Blister packing of 10's x 10 and 10's x 100.

NOSPAN TABLET 30MG

Bahan Aktif:

Setiap tablet mengandungi:

Dextromethorphan Hydrobromide 30mg

Indikasi:

Untuk melegakan batuk kering yang disebabkan oleh bronkitis, bronkiolitis, demam selsema dan berbagai keadaan saluran pernafasan

Dos:

Dos dewasa: ½ atau 1 tablet 3 kali sehari.

Didispens mengikut preskripsi pakar perubatan.
