| Description                           | A topical keratolytic, antibacterial, antifungal and antipruritic shampoo for dogs and cats.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Pharmacodynamics/<br>Pharmacokinetics | <p>The primary pharmacodynamic action of the active substances is antimicrobial. Miconazole is an imidazole with market antifungal and anti-yeast activity. The fungicidal action of the imidazole compounds, including miconazole, is by inhibition of ergosterol incorporation into membranes, so increasing concentrations of cytotoxic hydrogen peroxide accumulate within the fungal cell wall. Chlorhexidine is an antiseptic with broad spectrum activity. It is effective against many Gram negative and Gram positive bacteria. Chlorhexidine is absorbed onto bacterial membranes and interferes with membrane functions such as the sodium and potassium ATPase pump. At bacteriostatic concentrations, lysis of the membrane occurs, but at bactericidal concentrations, coagulation of the cytoplasm occurs without cell rupture. Chlorhexidine gluconate and miconazole nitrate possess virtually no secondary pharmacodynamics properties.</p> <p>Miconazole is poorly absorbed from the skin and gastrointestinal tract. Systemically available miconazole is metabolised in the liver and the metabolites excreted in the urine and faeces. Therefore, the combination of poor absorption and hepatic metabolism following topical application of this drug to dogs would not result in significant systemic concentrations of the drug either by absorption through the skin or by ingestion if the dog licked its coat or a lesion.</p> |

| Indication                            | For the treatment of seborrhoeic dermatitis associated with infectious by <i>Staphylococcus pseudintermedius</i> , <i>Malassezia (Pityrosporum) pachydermatis</i> and an aid in the treatment of dermatophyte (Ringworm) infections due to <i>Microsporum canis</i> , <i>Microsporum gypseum</i> and <i>Trichophyton mentagrophytes</i> in dogs and cats by decreasing time to clinical resolution and killing infective spores.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Recommended Dosage                    | 50mL of Dermcare Malaseb® Medicated Shampoo would be adequate to treat a 30kg, medium hair strength dog and 7 – 10mL of Dermcare Malaseb® Medicated Shampoo would be adequate for an adult cat. Repeat twice weekly until symptoms abate, then weekly or as directed by a veterinary surgeon.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Mode of Administration                | Topical application. Wet the animal thoroughly with clean water and apply Malaseb to the animal at several points and massage into the coat. Ensure that the shampoo is applied around the lips, under the tail                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

and between the toes. Leave shampoo on the animal for 10 minutes, the rinse off thoroughly with clean water and then dry.
