

YUCOMY[®] SHAMPOO 2% w/w

Ingredient(s):

Each gram contains:

Ketoconazole 20mg

Pharmacology (Summary of Pharmacodynamic and Pharmacokinetics):

Pharmacodynamic

1. Ketoconazole, a synthetic imidazole dioxolane derivative, has a potent antifungal activity against dermatophytes, eg. *Trichophyton*, *Epidermophyton*, *Microsporum* spp and yeasts, eg. *Candida* sp and *Malassezia furfur* (*Pityrosporum ovule*).
2. Yucomy Shampoo 2% w/w rapidly relieves flaking, scaling and itching associated with pityriasis versicolor, seborrhoeic dermatitis and pityriasis capitis (dandruff).

Pharmacokinetics

1. Percutaneous absorption of Ketoconazole shampoo is negligible since blood levels cannot be detected even after chronic use. Systemic effects therefore are not to be expected.

Indication(s):

Treatment and prophylaxis of infections in which the yeast *Pityrosporum* is involved, eg. pityriasis versicolor (localized), seborrhoeic dermatitis and pityriasis capitis (dandruff).

Dosage and Administration:

The affected areas of the skin or the hair should be washed with Yucomy shampoo 2% w/w, which should be left on the skin for 3 to 5 minutes before rinsing.

Treatment:

Pityriasis versicolor: Once daily for 5 days.

Seborrhoeic dermatitis and Pityriasis capitis: Twice weekly for 3 to 4 weeks.

Prophylaxis:

Pityriasis versicolor: Once daily for 3 days during a single treatment course before exposure to sunshine.

Seborrhoeic dermatitis and Pityriasis capitis: Once every 1 or 2 weeks.

Contraindication(s):

Known hypersensitivity to ketoconazole or any of the components of Yucomy shampoo 2% w/w.

Precaution(s) / Warning(s):

1. To prevent a rebound effect after stopping a prolonged treatment with topical corticosteroids, it is recommended to continue applying the topical corticosteroid together with Yucomy shampoo 2% and to subsequently and gradually withdraw the steroid therapy over a period of 2 – 3 weeks.
2. Avoid contact with the eyes. If the shampoo should get into the eyes, they should be bathed with cold water.
3. Prolonged use of topical ketoconazole may rarely lead to skin sensitization, resulting in hypersensitivity reactions with subsequent topical or systemic use of the medication.
4. Pityriasis versicolor may cause hyper or hypopigmented patches on the body. Treatment of the infection may not result in normalization of the pigment for several months.

Pregnancy and Lactation:

Since ketoconazole is not absorbed through the skin after topical application, pregnancy and lactation are not a contraindication for the use of Yucomy shampoo 2% w/w.

Side Effect(s) / Adverse Reaction(s):

Topical treatment with Yucomy shampoo 2% w/w is generally well-tolerated.

As with other local shampoos, a local burning sensation, itching or contact dermatitis (due to irritation or allergy) may occur on exposed areas. Oiliness or dryness of the hair and scalp has been reported rarely.

Symptoms and Treatment for Overdosage, and Antidote(s):

Not expected as Yucomy shampoo 2% w/w is intended for external use only. Ingestion may result in nausea and vomiting due to the detergent. In the event of accidental ingestion, only supportive measures should be carried out. In order to avoid aspiration, gastric lavage or induced emesis should not be performed.

Storage Condition(s):

Store at temperature below 30°C.

Shelf-Life:

3 years from the date of manufacture.

Product Description and Packing(s):

Orange-red, clear viscous liquid.

Plastic Bottle of 25ml, 60ml, 120ml and (1L For Export Only)
