

STOMORGYL 20 tablet

Composition:

Each STOMORGYL 20 tablet contains spiramycin (base) 1500000IU and metronidazole (micronized) 250 mg

Product Description:

Pink circular convex scored tablet.

Pharmacodynamics:

STOMORGYL 20 is a combination of two antibiotics: spiramycin and metronidazole.

Spiramycin is a bacteriostatic antibiotic belonging to the macrolide family. It is active against a wide range of Gram positive bacteria as well as mycoplasma. It is also active against a limited range of Gram negative bacteria.

Like other macrolides, spiramycin inhibits protein synthesis and attaches itself to bacterial ribosomes (50S ribosomal sub-unit) leading to an inhibition of bacterial protein synthesis.

Metronidazole is active against Gram negative and Gram positive anaerobic germs (Bacteroides, Fusobacterium).

The periodontal diseases are of primary importance in dogs. They are associated with the development of dental plaque which is successively colonised by aerobic then anaerobic microorganisms.

It has been reported the preponderance of *Streptococci*, *Pasteurella multocida*, *Staphylococci* and anaerobes in these oral infections of carnivores. Spirochetes and fusiforms are also often present in animals with oral infections.

The association metronidazole - spiramycin has a complementary spectra, all the germs recognised as pathogenic being inhibited by either one or both of the two active ingredients.

Pharmacokinetics:

After administration by oral route, peak plasma spiramycin concentrations were observed between 2 and 4 hours after administration and peak saliva spiramycin concentrations were observed between 4 and 8 hours after the administration of STOMORGYL 20 and the concentrations are approximately 3 times greater than those detected in the plasma.

Peak concentrations of metronidazole were detected earlier in the saliva (1 hour) and the concentrations were identical to those in the plasma.

The two active ingredients reach the buccal cavity in sufficient quantities to exceed the MIC of the germs responsible for pathological conditions in this area.

Indications:

For the treatment of periodontal and related oral conditions in dogs and cats.

Route of administration:

Oral.

Dosage:

For dogs and cats, 23.4mg of spiramycin and 12.5mg of metronidazole/kg bodyweight once daily for 5 to 10 days. Equivalent to : 1 tablet/20kg bodyweight once daily for 5-10 days. Do not break or crush the tablets.

Contraindications:

Known hypersensitivity to the active ingredients.

Warnings and Precautions:

Special warnings (for each target species)

None known.

Special precautions for use

i. Special precautions for use in animals
None.

ii. Special precautions to be taken by the person administering the veterinary medicinal product to the animals
In case of accidental ingestion obtain medical advice if needed. Wash hands after use. Should direct skin contact occur, wash affected area. Should accidental eye exposure occur, flush the eyes immediately with water and seek medical attention if needed.

Do not break or crush the tablets

Special precautions for the disposal of unused veterinary medicinal product or waste materials derived from the use of such products, if appropriate

Any unused product or waste material should be disposed of in accordance with national requirements.

Interactions with other medicaments:

The product should not be used concurrently with other antibiotics of the macrolide group.

Statement on usage during pregnancy and lactation:

Safety in pregnant dogs and cats has not been demonstrated.

Adverse Effects :

Unknown

Overdose and Treatment:

No signs of toxicity were seen in cats receiving 5 times the recommended dose, or in dogs receiving 8 times the recommended dose.

Storage Condition:

Do not store above 25°C. Store in a dry place. Protect from light.

Withdrawal Period:

N/A

Packing:

1 blisters of 10 tablets

FOR VETERINARY USE ONLY
