INFUSOL® D50
DEXTROSE 50% w/v INTRAVENOUS INFUSION BP

Composition:

The Solution Contains:

Dextrose Anhydrous	500 g/L
Caloric Value:	8374 kJ/L = 2000 kcal/L
Osmolarity:	2775 mOsm/L

Product Description:

The solution is a colourless solution

Pharmacology:

Pharmacodynamics:

Glucose provides energy. Glucose when given intravenously with water metabolises into glycogen leaving water to be absorbed to correct fluid imbalance. Glucose increases the movements of electrolytes across the semi-permeable membrane.

Pharmacokinetics:

Glucose is rapidly absorbed from the gastrointestinal tract. It is metabolised to carbon dioxide and water with the release of approx. 4 calories/gram of energy. It is readily metabolised. It may deaccelerate body protein and nitrogen losses, promote glycogen deposition and decrease/prevent ketosis in sufficient dose.

Bioavailability: As the solution is directly administered into the blood, it is 100% available.

Indication:

- Parenteral Nutrition.
- Hypoglycaemia.
- High caloric carbohydrate therapy, especially when fluid intake is limited.

Recommended Dose:

Adult patients.

According to individual requirements:

Dextrose 50% : Up to 14mL/kg of body weight and per day.
Up to 1mL/kg body weight and per hour.

Pediatric patients

Mean requirements/kg of body weight and per day.

1st year of life : 8 – 15g dextrose

2nd year of life : 12 – 15g dextrose

3rd-5th year of life : 12g dextrose

6th-10th year of life : 10g dextrose

Route of administration: Intravenous (IV)

Glucose solution with a concentration greater than 5% are hypertonic and should be administered by slow intravenous infusion via a central vein.

Contraindications:

- Diabetes mellitus (with the exception of hypoglycaemia conditions)
- Glucose intolerance, hypotonic dehydration if lacking electrolytes are not replaced.
- Over hydration.
- Hypokalemia.
- Hyperosmolar coma
- Acidosis

Side Effects:

Dextrose Injection and particularly hypertonic dextrose injection may have low pH, and such solution when injected may irritate the venous intima near the site of the injection to causing thrombophlebitis.

Hyperglycaemia and renal losses may occur in case of reduced glucose tolerance. These manifestations are normally prevented by reducing the dosage and/or giving insulin.

Enhanced bilirubin and lactate levels may be found if the recommended dosage is exceeded.

Symptoms and Treatment of Overdose:

Dextrose solution I.V. can cause fluid overload resulting in dilution of serum electrolyte concentrations, overhydration, congested states or pulmonary oedema.

Hyperglycaemia and glucosuria may be functions of rate of administration or metabolic insufficiency. To minimise these condition, slow infusion rate, monitor blood and urine glucose; if necessary, stop administration of dextrose or /and administer insulin.

Warnings and Precautions:

Blood glucose, serum electrolytes and water balance should be monitored regularly. Electrolytes are to be supplemented as required. The compatibility of any additives to this solutions should be checked before use.

Dextrose solutions should not be administered through the same infusion set through which also blood has or may be given because of the risk of pseudoagglutination.

Single dose container. Discard all unused contents. Do not use if leakage is detected. If any visible solid particles, growth or turbidity appears during storage, the product should not be used.

Storage Condition:

Do not store above 30°C.

Shelf Life:

3 years from manufacturing date in proper storage condition.

Do not use after expiry.

Presentation:

500mL x 20 LDPE plastic bottle per carton

10mL x 20 LDPE plastic ampoule per Box

Manufacturer / Product Registration Holder:

AIN MEDICARE SDN.BHD.

Lot 4933, 4934 & PT2464, Jalan 6/44, Kaw. Perindustrian Pengkalan Chepa 2, 16100 Kota Bharu, Kelantan, MALAYSIA.

HANDLING INSTRUCTION

AIN MEDICARE INTRAVENOUS INFUSION FLUID IN LOW DENSITY POLYETHYLENE (LDPE) BOTTLE
The bottle is made from injectable grade polyethylene.
PARTS OF THE PLASTIC BOTTLE

Top view after pull ring cap is removed. Please refer whichever applicable design.
INSTRUCTION FOR THE USAGE OF IV ADMINISTRATION SET & ADDITION OF DRUG

AIN MEDICARE INJECTION SOLUTION IN LOW DENSITY POLYETHYLENE (LDPE) AMPOULE

1. Detach ampoule along parting line

2. Twist off tab

3. Attach luer lock syringe, luer slip syringe or hypodermic needle vertically to the ampoule.

4. Draw out injection fluid using luer lock syringe, luer slip syringe or hypodermic needle. Ensure the connection is tightly secured for effective aspiration of the liquid.
