

GYROFLOX TABLETS
(Enrofloxacin Tablets 150 mg)

COMPOSITION:

Each uncoated tablet contains:

Enrofloxacin B.P. (Vet.): 150mg

Excipients : q.s.

Not for Human Use For Animal Treatment Only “Wash hands after use”
--

DESCRIPTION:

Light yellow coloured circular tablets with a break line on one side.

PHARMACODYNAMICS

Enrofloxacin is a synthetic, broad spectrum antimicrobial substance, belonging to the fluoroquinolone group of antibiotics.

ATC Vet Code: QJ01MA90

Enrofloxacin is bactericidal in action with activity against Gram positive and Gram negative bacteria and mycoplasmas. The mechanism of action of the quinolones is unique among antimicrobials – they act primarily to inhibit bacterial DNA gyrase, an enzyme responsible for controlling the supercoiling of bacterial DNA during replication. Resealing of the double standard helix is inhibited resulting in irreversible degradation of the chromosomal DNA. The fluoroquinolones also possess activity against bacteria in the stationary phase by an alteration of the permeability of the outer membrane phospholipid cell wall.

PHARMACOKINETICS

The pharmacokinetics of enrofloxacin in dogs and cats are such that oral and parenteral administration leads to similar serum levels. Enrofloxacin possesses a high distribution volume. Tissue levels 2-3 times higher than that found in the serum, have been demonstrated in laboratory animals and target species. Organs in which high levels can be expected are the lungs, liver, kidney, skin, bone and lymphatic system. Enrofloxacin also distributes into the cerebrospinal fluid, the aqueous humour and the foetus in pregnant animals.

TARGET SPECIES:

Dogs

INDICATION:

The product is for use in dogs in the treatment of bacterial infections of the alimentary, respiratory and urogenital tracts, skin, secondary wound infections and otitis externa where clinical experience, supported where possible by sensitivity testing of the causal organism, indicates enrofloxacin as the drug of choice.

DOSAGE:

The dosage rate of enrofloxacin is 5 mg/kg given orally once daily or as a divided dose twice daily for 3 to 10 days with or without food.

The daily dose is achieved as follows:-

Large dogs: 1 tablet Gyroflox Tablets 150 mg per 30 kg bodyweight.

CONTRAINDICATION:

Not for use in dogs less than 1 year of age or in exceptionally large breeds of dog with a longer growth period under 18 months of age, as articular cartilage may be affected during the period of

rapid growth.

Gyroflox Tablets 150mg should not be used for prophylaxis.

WARNINGS AND PRECAUTIONS

i. Special warnings for each target species

Please see point “Contraindication”

ii. Special precautions for use in animals

Do not exceed the recommended dose.

iii. Special precautions to be taken by the person administering the medicinal product to animals

None.

Iv. Other precautions

None.

INTERACTIONS WITH OTHER MEDICAMENTS

None known

PREGNANCY AND LACTATION:

The product may be used safely in pregnant and lactating animals

ADVERSE DRUG REACTIONS:

In dogs enrofloxacin may affect articular cartilage during the period of rapid growth

OVERDOSAGE:

Do not exceed the recommended dose. In accidental overdose vomiting, diarrhoea and CNS/behavioural changes may occur. There is no antidote and treatment should be symptomatic.

STORAGE: Store below 25°C (air conditioning)

PRESENTATION:

10 Amber ALU/PVC Blisters packed into an outer carton with pack insert

Manufactured by:

INDIAN IMMUNOLOGICALS LIMITED
